

Data Warehouse Optimisation Service

Reduce your annual Data Warehouse running costs by up to 30%

DATA  VALUE

Many organisations' Data Warehouses have evolved over time to become critical components that many departments and users depend on. Are you confident that you are maximising and sustaining the long-term return on your investments however?

Increasing storage and performance requirements, Data Quality defects and challenging requirements from stakeholders can increase costs, complexity and reduce your time to market.

Data to Value

We are an Information Management consultancy that specialise in applying the latest Data Science and Big Data techniques to help organisations optimise their existing Data Warehouse investments.

Our Data Warehouse Optimisation Check Service enables clients to better understand and reduce costs, understand usage patterns, reduce risk and improve stakeholder engagement.

Our solution

We provide you with actionable insights and practical steps to improve the ROI of your Data Warehouse

Here's how we do it:

We analyse your Data Warehouse code, architecture, data models, content and usage patterns using the latest data mining and profiling tools & techniques.

We identify potential cost savings from issues such as:

- Data Quality defects
- Data integration & loading issues
- Storage & query inefficiencies
- Data Governance, lineage & sourcing issues
- Architectural and modelling issues
- Standards, conformity, risk and compliance issues

We provide you with interactive dashboards, actionable intelligence and practical recommendations and support to reduce your Data Warehouse costs & increase ROI.

We work with all enterprise data warehouse technologies including:

Example of interactive dashboards:

Understand the quality of the data in your warehouse and where your biggest risks reside

Leverage opportunities to use the latest Big Data & Data Science techniques to gain more insight from your data

Tune queries, reduce storage costs and archive infrequently used data

Understand & reduce the complexity of storage, ETL, presentation and other components
